

WELCOME

Welcome to the February newsletter of 2026.

Recent conversations with our members this year indicate that the holiday period now feels well behind us, with 2026 already off to a busy start. Despite continuing challenges in some areas of our sector, there is clearly no shortage of work to be tackled. This certainly rings true for your industry association as well.

In this month’s update, we have included a wide range of important news and industry developments since our December update. We encourage you to take the time to read this update carefully, share it with your team, and review the full newsletter, as there are several key items to be aware of for all parts and sectors of our industry.

Scott Lawson

Sprinkler and Fire Fighting Water Supply Issues

Water supply challenges related to fire sprinkler systems remain a significant concern for industry throughout New Zealand, and this situation is expected to persist in the short to medium term. Water providers are primarily focused on delivering potable water, while contending with aging infrastructure, constrained budgets, and rapid urban development. These combined pressures mean that swift solutions for fire fighting water supply are not expected.

Both Chris Mak and I have participated in numerous discussions with water providers nationwide. Through these engagements, it is clear that our industry’s voice is being acknowledged. Nevertheless, there are intrinsic limitations in achieving all our preferred outcomes, largely due to logistical constraints, infrastructural realities, and funding challenges.

Given these circumstances, it is vital for the industry to carefully consider design parameters, engineering approaches, and cost-benefit analysis much earlier when specifying and planning fire sprinkler systems. Identifying and addressing supply and delivery issues early in the project design and planning process is essential. Early engagement with clients is crucial so that appropriate solutions can be offered before construction, commissioning, inspection, and practical completion. Additionally, there ▶

are several factors we need to address with existing systems, particularly where design criteria can no longer be met due to reduced water supply from providers.

For those with particular interest in water-based systems, please refer to the latest update from Chris Mak on page 6, where further insights, links, and information regarding Watercare's Asset Management Plan 2021–2041 are provided.

Retirement of the FPANZ Passive Fire Protection Product Register

In 2018, the Fire Protection Association New Zealand (FPANZ) launched the Passive Fire Protection Product Register. This initiative was modelled after other successful product registers, such as the Fire Alarms Product Register, and aimed to address a gap in the passive fire protection market. At the time, there was insufficient information and limited ability to source passive fire protection product data, so the register served as a valuable resource for industry stakeholders.

Over the years, suppliers and manufacturers have made significant progress in developing and offering passive fire protection product information and data. The market is now well-established, with individual product information offerings having matured considerably. Based on industry feedback and recognition of the advances made by suppliers, FPANZ will decommission the Passive Fire Protection Product Register effective 1st July 2026.

FPANZ remains committed to supporting all stakeholders throughout this transition period, ensuring a smooth changeover and continued collaboration within the industry.

FPANZ, FPAA and FCIA Passive Fire Webinars series

As part of our ongoing global alliances with the Fire Protection Association Australia (FPAA) and the Firestop Contractors International Association (FCIA), we have received outstanding feedback on the collaborative webinars focused on Passive Fire Protection that have been delivered this year. These sessions have proven valuable in sharing international best practices and fostering connections across the industry.

We would like to remind everyone that there are still three more webinars scheduled to be delivered before the end of April the dates are on page 3 of the newsletter. We encourage all members to take advantage of these remaining sessions, as they offer valuable insights and updates relevant to both global and local markets.

The global partnerships FPANZ has established over the past year will continue to benefit our membership by connecting New Zealand professionals with international developments, while also supporting the adaptation of these advances to suit the unique requirements of the New Zealand market.

Finally, please remember that these webinars are free of charge for all FPANZ members and also contribute towards Continuing Professional Development (CPD) hours, provided that pre-registration has been completed. Don't miss this opportunity to learn, connect, and enhance your professional knowledge.

FireNZ 2026 Planning and Updates

Planning for FireNZ 2026 is already progressing very well, and we have several important updates to share with our Sponsors, Exhibitors, and delegates. The exhibitor's pack is now available for those interested in exhibiting at the event. If you would like a copy, please reach out to us; previous exhibitors will automatically receive the pack next week. ►

COMMENTARY cont.

In addition to this, we are preparing to release information regarding the FireNZ industry awards for 2026. We are actively seeking both sponsors and award nominations, and we encourage your participation. Last year's awards saw excellent feedback and significant growth, highlighting their increasing popularity within our community.

FireNZ Delegate Presales, Pre-sale pricing: We give our highest level of discount to anyone who intends to attend FireNZ or who normally does, irrespective of the agenda having been released. Our pre-sale period is when we are selling before we have locked in our speakers and are still selecting international and local speakers, programme content, topics, site visits, and finalising our event timings. This gives delegates the chance to coordinate travel, accommodation and prepay to attend giving maximum discount. Presales will commence next week.

FPANZ “Get It Right” (GIR) topics and input

We have some great topics and seminars we are about to launch in 2026 so keep an eye out for these in your inbox. However, in saying that we are also interested in hearing from our members about topics, training and areas we can support your staff. Please drop us a note with industry training topics you would like delivered this year to your staff.

Until next month,

Scott Lawson

HOFFE SIG Update

› Authors **Steve Smith & Lance Hunt** – HOFFE SIG Chairs

Well, as we head towards Autumn and look back, this summer seems to have had far to many wet days. On the plus side, we have had our first HOFFE group meeting of the year with a good turnout including the new President of FPA Australia, Ben Parkhill.

There was some good discussions around many topics, but one of particular interest was the latest Technical Advisory Note for Lithium-Ion Batteries: Portable Fire Extinguishers and Fire Blankets (TAN-09, Version 3, November 2025). Elaine had shared this six-page document with the group by email prior to the meeting – it was agreed this was good document which was quite detailed and had an easy to follow conclusion that is consistent with our AS/NZS Fire Equipment standards.

In short, TAN-09 states that as per AS/NZS3000-2018, AS/NZS4836-2023 and AS/NZS5139-2019, equipment is considered energized if connected to a power source or retains stored energy. Lithium-Ion batteries are classified as energized equipment as they hold stored electrical energy even when disconnected. The result is that for this type of fire, only E-rated fire extinguishers, non-conductive and approved for energized equipment should be used.

It is no secret that there is a fair bit of work going on to deal with the fire risks associated with Lithium-Ion batteries. This involves reviewing and developing the standards that can be used for fire equipment that caters for the associated risks. That said, at present the situation is as spelt out in Version 3 of TAN-09 and consistent with our industry's often repeated phrase "People before Property".

Our next meeting is on the 15th of April, online at 1pm.

Regards,

Steve Smith & Lance Hunt,
HOFFE SIG Chair 2025/2026

Fire Fighting Water Supplies

» Author: **Chris Mak, Aon Fire Protection**

The potential delay in opening the Pak’nSave Highland Park due to the volume required for the sprinkler system made headline news last year. While the public supply was able to supply the necessary flow, Watercare was insisting that the draw-off was reduced to a volume they were willing to provide.

The Association has opened discussions with Watercare to ensure that Watercare understands the fire protection industry’s concerns, and in addition, to understand Watercare constraints on providing firefighting water supplies. This paper has been generated following the initial discussion, noting that the issues discussed here will be present with other Water Supply Providers.

It is imperative to acknowledge that Watercare’s priority is to provide potable water to ensure the health of the public. Auckland currently has a population of around 1.6 million and is expected to hit 2 million early next decade. Auckland’s Public Consultation Plan 120 (Plan 120) is proposing housing intensification along transportation corridors and town centres.

Some of the preparation for this growth includes creating smaller catchment zones for water supplies. Their planned \$18.5b investment into infrastructure includes a plan to draw more water from the Waikato River, which could include an approximate 50km long 1200mm pipe to transport the water to the Auckland region. The Waikato River project will only provide water for an additional 15 years, with work required to ascertain where the next 15 years’ additional water supply will occur. Options being considered include purification of wastewater or the construction of a desalination plant.

Another consideration is what impact the draw off for a sprinkler system will have on other areas of the infrastructure. For example, sprinkler designers will be aware that the sprinkler standard allows the pressure in the public supply to be lowered to a minimum of 100kPa. However, if the flow is drawn at an area of low elevation, it can depress the pressure in higher elevations to below gauge zero. This is extremely problematic in older areas using fragile asbestos cement pipework.

One more significant concern is that of water hammer surges. One of the factors that exacerbates water hammer is pipe length. Hence, for an installation with high design flows, even if testers “think” they are closing valves slowly, significant water hammer pressure surges can occur.

With these factors in mind, even if the water supply is adequate at the point of connection to the public infrastructure, it may not be available in the long term, or even short-term future, and may impact on other parts of the water supply provider’s infrastructure.

Given these factors, Watercare are looking at zoning their infrastructure into three categories:

1. **Residential** – allows a fire flow of 25L/s.
2. **Industrial** – allows a fire flow of 50L/s.
3. **Commercial** – allows a fire flow of 100L/s.

The fire flows include an allowance of 25L/s for fire fighter hose streams, so on that basis, a sprinkler system in a residential zone would require on site water storage. Obviously, with the proposed intensification if Plan 120 is implicated, this will have some unfortunate consequences. Buildings (or groups of buildings) will require fire pumps and dedicated water storage. We will explore this further, potentially with Watercare and Fire and Emergency, as this will either act as an incentive to engineer sprinkler systems out of buildings, or, in addition to increasing the costs of a sprinkler system, will decrease the reliability of the sprinkler system by introducing complexity. Both alternatives will decrease the safety of the public, fire fighters and increase environmental discharges should a fire occur. ►

Fire Fighting Water Supplies *cont.*

It is clear that communication between designers and water supply providers can improve. Watercare have plans in place to communicate more clearly as to their ability to provide firefighting water supplies. This will include the publication of maps showing the proposed water supply zones.

The potential issues in not being able to draw adequate volumes of fire fighting water from the public infrastructure can be significant, if determined late in the design phase of a building, let alone in the construction phase. Discussions should be held with Watercare early in the spatial planning for a project, especially if the design flows are high.

For those interested, the following link is to Watercare's Asset Management Plan 2021-2041.

FPANZ & FCIA are excited to announce the following updates & offerings to New Zealand-based members:

MANUAL OF PRACTICE REVISION

FCIA are currently revising the Manual of Practice (MOP) to ensure it serves as a superior, globally accepted standard. Our goal is to provide a framework that allows regions to plug in their own localised tools and offerings.

To further support this, we have launched two new membership types to engage design professionals and students. We would like to build on our existing MoU to offer these to the New Zealand industry.

NEW FCIA MEMBERSHIP CATEGORIES:

Category	Target Audience	Fee (USD)	Key Benefit	Application Form
Designer Member	MEP Consultants, Architects, and Specifiers.	\$200/year	Access to Firestop Education (Level 0 & 1)	Scan QR or click here to download Designer Member application form 
Student Member	Students in Architecture, Engineering, or Fire Protection.	\$50/Year	Access to Firestop Education (Level 0 & 1)	Scan QR or click here to download Student Member application form

n3 Trade Card and Bunnings PowerPass Changes

We've got some changes on the way at n3. FPANZ Members will still receive the same great discounts and offers from n3 and our Suppliers, but the way they access these discounts will change from 1 April 2026.

1. **TRADE CARD APP:** n3 is transitioning the physical n3 Trade Card product exclusively to the mobile app. The app offers faster access, easier management, and greater efficiency.
 - › **Member management:** Members can be easily added or removed.
 - › **Instant access to start saving:** No production or mailing delays - Members can download the app and start saving straight away.
 - › **Supplier management:** Supplier offers can be added instantly, and Members notified.
 - › **Better for the environment:** Reduced printing, postage, and delivery costs, and plastic waste.

2. **BUNNINGS POWERPASS:** Members currently using the n3 Trade Card with Bunnings will need to migrate to Bunnings PowerPass to continue receiving their n3 discounts. Alternatively, they can set up a credit account with Bunnings.
 - › **More functionality:** Check live pricing, confirm product availability, use self-checkout to save time, and access digital receipts in one place.
 - › **Simple setup:** Registering for a PowerPass account is quick and easy. Once set up, your Members can use it at Bunnings stores nationwide.
 - › **Team access:** Your Members can allocate PowerPass cards or app access to their team so they can continue using the n3 discount on cash purchases.
 - › **Tailored trade pricing:** n3 pricing will be automatically applied to their PowerPass account.

In the coming months, Bunnings will be phased off the n3 Trade Card app, so it's important that FPANZ Members start migrating to PowerPass to continue receiving their n3 discounts.

NEXT STEPS

n3 will communicate directly with your Members about these changes, including the migration to the Bunnings PowerPass and the move to the Trade Card app.

Please feel free to contact me with any questions. Your support through this transition is much appreciated.
